

**INVESTMENT APPROACH**

The fund invests in the most liquid global stocks, bonds and money market indices, as represented predominantly by their Exchange Traded Funds (ETFs). It uses quantitative risk management techniques in order to optimise returns and avoid major draw downs.

**FUND MANAGER'S COMMENTS**

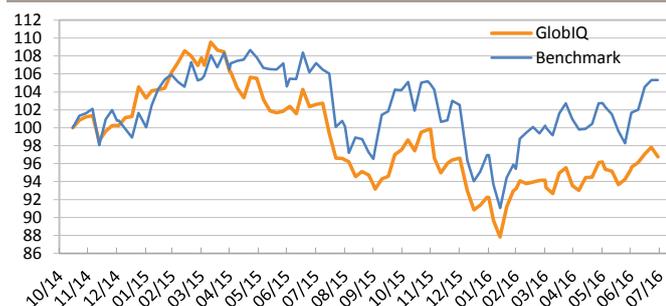

In July, our fund was up 1.5% and the net asset value (NAV) per share closed at 96.75.

Market experienced week by week new record highs as a result of better than expected corporate earnings as well as the low interest rate environment. Data shows that US economy is expanding between 2% to 2.5% on average for the last seven years which helped job growth and boosted consumer consumption as the main engine for GDP growth. Historically, as long as there is no event risk or another dominant factor during the earning season, investors mainly pay attention to the corporate earnings and push the valuation higher as we observed this month. But, in our view, investors will soon pay attention to the Fed and interest rate decision as well as Brexit negotiation and impact on the Eurozone environment.

This month, our quantitative model indicated positive returns on global equities, which made us increase our asset allocations to the US and European equities, while keeping our bond positions unchanged. We were continuously re-balancing our portfolio in order to benefit from the upward market while managing downward risks. We kept our market-neutral strategy for U.S. and European equities and, at the same time, we reduced the weight on high volatility stocks globally and invested in lower volatility indices such as *MSCI World minimum volatility*. Further, we diversified into *Utilities* and *Consumer Consumption* sectors. By the end of the month, we started to increase our cash position again and diversified our equity positions globally, in order to manage market volatility.

We are still not convinced by the positive trend in the market and strategically keep de-risking our portfolio. Also, US presidential election is likely to add to the market uncertainty and cause volatility in the coming months.
